Educational City on Metaverse

April 1, 2022

metaEDucationVerse (EDV)

Educational City on Metaverse

EDV is created through the collaboration between computer lecturers from different universities in Thailand, aiming at constructing fundamental infrastructure on a virtual world. This city will comprise various places and activities related to education and other businesses supporting education, such as shops selling e-books, software, NFT, photographs, video files, sport equipment, musical instruments, etc.

What are available in Educational City on Metaverse?

3D graphic of a virtual world

○ Users can meet and join different activities together.

○ Users can choose either the VR glasses format or the one without VR glasses.

Web 3.0 + Blockchain & Cryptocurrency

✓ Users will be the center of everything. Items obtained from this verse can be used in other verses, such as digital assets (e-books, NFT, photographs, videos) which can be used in other systems with the standard NFT's ERC. These assets can be sold on the web OpenSea as well.

✓ Payments of educational courses and other transactions will be made through cryptocurrency.

Who will benefit from this system and what are the benefits?

○ General users can join activities on this metaverse (after the system is completed), such as attending lectures in different courses which are offered for free. In addition, they can meet people in this virtual world, attend concerts, take a walk for city sightseeing, and a lot more.

○ The first 400 VIP registered users (both Thais and foreigners) will be offered a free house at suburban areas in this virtual world. Those VIP users will have a chance to be selected to be business owners (use case/the very first businesses on metaverse) without any cost.

○ Retail investors (those who exchange BNB tokens for EDV tokens) will receive a share of the transactions paid using cryptocurrencies. For example, selling digital courses, selling NFTs and other products that was paid using cryptocurrencies.

○ Big investors (VC) will gain benefits from transactions in a similar way retail investors will get. The difference is that they have to invest bigger amounts (in exchange for higher benefits). Big investors have to contact the founding team and offer what they can support this project (The capital for renting a server and hiring computer experts is needed for project creation).

TIMELINE

○ February- April, 2022: The founders and 400 VIP members (both Thais and foreigners) are invited.

○ March 10-15, 2022: The white paper (Thai version) is published.

○ March 16-31, 2022: The white paper (English version) is published.

○ April 1-30, 2022: The system's token EDV is available to trade with BNB to buy the mugs of Educational City on Metaverse.

○ April-May, 2022: The system token' EDV is available to trade with BNB at different levels of stable prices (the prices will be low at the first stage).

○ April-May, 2022 onwards: The system's token EDV is available for trading with BNB on Pancake Swap.

○ May, 2022: The fundamental infrastructure systems and the first use cases, such as tutoring schools and book shops are developed.

○ June, 2022: They system is further developed and tested.

○ July, 2022: The system is open for use.

Example case: Book shops + NFT + Digital assets

The book shops will benefit from goods on consignment.

○ The content owner will bring e-books, NFT, photographs, videos, and software to sell at the book shops on consignment.

○ General people will come to buy products by cryptocurrency.

○ The percentage will be assigned in advance through a smart contract. For example, the book shops will gain 20%, the content owner will gain 70%, and the rest 10% will go to the system.

The content owner will get the assigned percentage, and one part will go to the system (this platform).

✓ From the 10% which goes to the system, 6% will be allocated to all EDV holders based on the proportions of holding.

✓ 2% from the above 10% will go to the VC.

✓ 2% from the above 10% will go to the co-founders.

Tokenomic

○ Token's name: EDV, the abbreviation for metaEDuVerse – website: https://www.meta-edu.io

    ✓ Token ID = 0xf359c0DC976A943D3203cF97baa00513FfC020AB

○ Blockchain platform: BSC (Binance Smart Chain). In the future, it may move to Polygon or other chains.

  The team may also create the system's own blockchain as appropriate.

○ Total amount: 100,000,000 tokens (no burning and no more minting)

○ Selling

    ✓ March 8 – April 10, 2022: Rate 0.01 BNB = 100 EDV

    ✓ April 10 – May 20, 2022: Rate 0.01 BNB = 99 EDV. This price will be increased at different stages,

      but it will not exceed 0.01 BNB = 80 EDV in the late May.

    ✓ 1/3 of the obtained BNB will be used as the cost of system creation (hiring programmers and graphic designers).

      The other 2/3 will be put in Liquidity for sale on Pancake Swap.

    ✓ When the fixed-rate EDV in the pool is sold out, they will only remain on Pancake Swap, and the price will depend on the demand.

Team

- Asst. Prof. Dr. Thawatchai Chomsiri (MSU), Founder
- Asst. Prof. Chumsak Sribunrueng   (MSU), Public relations
- Asst. Prof. Dr. Kittiphong Praphan (MSU), International public relations
- Dr. Supannada Chotipan (KMITL)
- Asst. Prof. Dr. Sanya Khruahong   (NU)
- Dr. Tipajin Thaipisutikul (MU)
- Asst. Prof. Dr. Kanda Boonsothonsatit (KMUTT)
- Asst. Prof. Dr. Supitcha Supanasomboon (SWU)
- Asst. Prof. Dr. Suchart Khummanee (MSU)
- Dr. Paitoon Thipsanthia (KSU)
- Mr. Rossarong Patthananusorn (KSU)

- Assoc. Prof. Dr. Chotipat Pornavalai (KMITL), Senior Consultant
- Assoc. Prof. Dr. Chakchai So-In (KKU), Senior Consultant
- Asst. Prof. Suwichai Phunsa (MSU)

Q & A

○ If I buy EDV with a fixed-rate price, where can I sell it?

✓ When the Dev team has enough BNB (every 9 BNB approximately), 6 BNB will be added in Liquidity, so the EDV holder can sell it on Pancake Swap.

✓ In the first stage, EDV will be sold through the fixed-rate price along with the dynamic price on Pancake Swap. Therefore, although there will be fluctuation of the dynamic price, it will tend to be close to the fixed-rate price until the fixed-rate price is sold out. The method is that 60% of all supply will be sold with the fixed-rate price. When this 60% is sold out, BNB with the value of about 40% (from the proportion of 2/3) of the sold EDV will be paired with the rest 40% of EDV. This will be used as Liquidity on Pancake Swap. That is to say, in the later stages, there will not be fixed-rate sale. Then, EDV will be traded on general trading webs and Pancake Swap.
